

Tasks to solve in this exercise

1. Open the attached Power BI .pbix file or use your own solution from the last exercise

Page 1

2. Rename the page to "Overview".
3. Add the Category column in the Legend of the Sub-Category to make a drill down.

Page 2

4. Create a new Page and name it – Profit Details
5. Create Line Chart and visualize the Profit over the Order Date in the axis. Use a Trend Line and adjust the style to your personal taste.
6. Visualize the profit in either a stacked bar chart or any other visual across the Day Name (weekdays).
7. Visualize also the profit across the Customer Name.
8. Set up a Drill Through to drill through from Page 1 to this page using the Category, Sub-Category and the City. Disable "Keep all filters".
9. Set up a bookmark and a button to remove all the filters after the drill through on this page.

Page 3

10. Create a new page and name it Sales Taget.
11. Create a Line Chart with the Taget from the Sales taget table and the Amount of the Order Details table. Both columns should be in the Values field so that you get the same axis.
12. Sort it Ascending.

Page 3

13. Create a new Page and have fun analyzing whatever you are interested in 😊
