

Tasks to solve in this exercise

1. Open the attached Power BI .pbix file or use your own solution from the last exercise

Sales target

2. Have a look at the Month of Order Date column

Order Details

3. In order to prepare our model to establish the right relationship between the tables later on we want to create a similar column also in the List of Orders table.

So create this column from example in the format (for example Apr-18, May-18 etc.)
